

We strive to set the long-term standard for automotive parts manufacturers in interior, exterior and engine products, in terms of design, business acquisitions and production. To do this, the Plastic & Leather Systems is focusing on process management and performance, relying on the efficiency of their processes and the involvement of the men and women who make up the branch.

This objective will be achieved by maintaining customer and interested parties satisfaction, and by meeting their requirements in terms of Quality - Cost - Delivery on a daily basis.

In this regard, we adhere to the IATF 16949 standard, from product development to delivery to our customers, by launching initiatives for improvement based on our processes.

Our quality policy reflects our desire to develop staff skills across all entities, and to optimise operational performance.

Our company is concerned with the safety of people and property, and is committed to protecting the environment, both in product design and manufacturing.
